

REQUEST FOR TENDER (RFT)

RFT-2026-09-01

Automated Tender Document Processing & Workflow Platform

RFT REFERENCE

RFT-2026-09-01

ISSUING AUTHORITY

Apex Enterprise Solutions Ltd

CLOSING DATE

October 15, 2026, 17:00 SAST

1. Introduction & Executive Summary

Apex Enterprise Solutions invites qualified technology vendors and software development firms to submit formal tenders for the design, development, and deployment of an **Automated Tender Document Processing & Workflow Platform**. The objective of this procurement is to streamline internal tender generation, parse incoming supplier submissions using advanced data pipelines, and automate compliance checks.

Important Note: All proponents must review the specifications herein and ensure their technical architecture aligns with secure containerized deployments and modern cloud-native standards.

2. Scope of Work

The successful vendor will deliver a robust, scalable software platform meeting the following functional and non-functional requirements:

- **Document Generation Engine:** Automated creation of tailored RFT documents, contracts, and schedules based on dynamic project parameters.
- **Parsing & Extraction Pipeline:** Intelligent document ingestion to extract pricing schedules, compliance affirmations, and technical specifications from unstructured PDF and spreadsheet submissions.
- **API Integrations:** Secure RESTful endpoints and containerized microservices capable of integrating with existing ERP and authentication layers.
- **Role-Based Access Control (RBAC):** Granular security controls segregating evaluator workflows, tender creation, and administrative oversight.

3. Technical & Architecture Requirements

Proponents are expected to propose a modern technology stack that prioritizes maintainability, security, and high throughput. Preferred frameworks and infrastructure components include:

- **Backend Services:** Python (FastAPI / Node.js) with asynchronous worker queues.
- **Frontend Dashboard:** Responsive web client built with Next.js or React.
- **Containerization & Deployment:** Docker container architecture orchestrated via Kubernetes or scalable VPS environments.
- **Data Security:** End-to-end encryption at rest (AES-256) and in transit (TLS 1.3), adhering to strict data privacy standards.

4. Submission Guidelines & Evaluation Criteria

Tenders must be submitted electronically in PDF format no later than the closing date specified above. Late submissions will not be evaluated. Proposals will be scored according to the following weighted criteria:

Criteria ID	Evaluation Dimension	Weight	Minimum Threshold
TEC-01	Technical Architecture & Scalability	35%	70%
PRC-02	Commercial Pricing & Total Cost of Ownership	30%	N/A
EXP-03	Vendor Experience & Past Similar Deliveries	20%	60%
SLA-04	Support, Maintenance & SLA Commitments	15%	60%

5. Tenderer Declaration & Sign-Off

By submitting a response to this Request for Tender, the proponent certifies that all information provided is accurate, uncollusive, and authorized by the company board or designated representative.
